NOKIA TECHNOLOGIES LAUNCHES WITHINGS THERMO, THE FIRST FDA CLEARED WI-FI CONNECTED TEMPORAL THERMOMETER

The Fast, Noninvasive Thermometer Provides Families with an Easy and Smart Solution for Managing Fevers

July 19, 2016

BOSTON, Mass. – Withings, part of the Nokia family, today announced the availability of Thermo, the first Wi-Fi-connected temporal thermometer, exclusively at U.S. Apple stores and Withings.com. Originally announced at CES and honored with 2 CES 2016 Innovations Awards, Thermo goes to market in the US with FDA clearance and will provide one of the fastest, most accurate and most hygienic temperature measurements available. Thermo's designated app also integrates with Boston Children's Hospital's Thermia™ tool, offering users helpful insights on how they can manage a child's fever.

Thermo measures temperature from the forehead's temporal artery, providing one of the most accessible and reliable assessments of body temperature, while ensuring a comfortable and sanitary process. With the new HotSpot Sensor™ Technology, a sophisticated array of 16 infrared (IR) sensors take 4000 measurements in just two seconds to detect the hottest point. A specially-designed algorithm then automatically corrects for biases, such as skin heat loss and the ambient temperature, allowing Thermo to deliver a single, highly-accurate temperature reading. Thermo is priced at \$99.95.

Easy as 1, 2, 3

Users simply press a button and scan the thermometer across their forehead, up to 1cm above the skin to get an instant reading. Since there is no contact necessary, Thermo is exceptionally

hygienic. Two vibrations notify users when the measurement is complete, and the temperature is displayed in either Celsius or Fahrenheit. In addition, the device takes the users' age into account and provides instant color-coded feedback via an LED display that will glow Green for normal, Orange for elevated, and Red for high temperature levels. With Thermo, taking the temperature of a sleeping child, and evaluating their fever has never been easier. "Withings Thermo was designed to finally provide families with a solution that they can trust to provide highly accurate temperature readings in seconds, without having to wake the ill child or manually log their health levels," said Cedric Hutchings, VP of Digital Health, Nokia Technologies.

The device operates on two AAA size batteries that can last up to two years, making it exceptionally portable - easily transported from the household medicine cabinet to a mother's purse or father's pocket.

Thermo App: A New Way to Manage Fevers

Thermo automatically sends temperature readings to your iOS or Android smartphone on the dedicated application, via Wi-Fi or Bluetooth, allowing a seamless synchronization. The app gives the ability to better control and manage fever episodes for multiple users, by following the temperature trend and getting a clear fever status at any time. It also allows users to provide contextual information associated with readings, such as logging symptoms or making notes of any administered medicines. Notifications can be set to prompt parents with measurement reminders to better monitor fever episodes. The app also integrates with Boston Children's Hospital's Thermia™ tool, which provides educational information that can provide insights on how to care for a child with a fever.

FDA-Cleared Status

The Withings Thermo is a Class IIa Medical device and has been granted FDA-Cleared status in the US. Thermo joins the Wireless Blood Pressure Monitor in the range of Withings' FDA-cleared devices, and reinforces Withings positioning as a leader in digital health industry. Withings has built a unique ecosystem that covers regulated medical devices as well as general fitness devices, and continues to reinvent personal health management where accurate and meaningful data allows for better care.

Availability

Withings Thermo is now available for purchase in the US exclusively at Apple Stores, on apple.com and on www.withings.com for \$99.95. It will be soon available in the rest of the world.

About Withings

Withings, part of the Nokia family, leads the connected health revolution. We invent beautiful, smart products and services that help people become happier and healthier. Founded by visionary innovators Cédric Hutchings and Eric Carreel in 2009, Withings was acquired by Nokia Technologies in May 2016, and will accelerate innovation in the digital health space.

The award-winning range of Withings products built across the health spectrum includes activity trackers (Withings Pulse, Activité and Go), the Wi-Fi scale and health station (Body Cardio), the Wireless Blood Pressure Monitor, the security camera with air quality sensors (Withings Home), the smart temporal thermometer (Withings Thermo) and an advanced sleep system (Withings Aura). Every piece of collected data comes to life in Withings applications where users can find coaching, motivation, and insights to shape key aspects of their health.

About Nokia Technologies

Nokia Technologies is Nokia's advanced technology and licensing business. Formed in 2014, TECH builds upon our solid foundation of industry-leading licensing and technology R&D capabilities. By focusing on Digital Health, Digital Media, Brand Licensing and Patent Licensing, TECH is expanding the human possibilities of the ever-evolving world of technology.
