

# Withings Accepted into CMS ACCESS Model, Expanding Technology-Enabled Chronic Care for Medicare Beneficiaries

*Withings joins the inaugural ACCESS cohort, bringing over a decade of connected health expertise and a proven health system partnership model to Medicare's new era of value-based chronic care.*

Boston, MA – April 20, 2026 — Withings, the global leader in connected health, announced that it has been accepted by the Centers for Medicare & Medicaid Services (CMS) for the inaugural cohort of the ACCESS Model. Withings will participate in both the Early Cardio-Kidney-Metabolic (eCKM) and Cardio-Kidney-Metabolic (CKM) clinical tracks across all 50 states and will begin enrolling Medicare beneficiaries when ACCESS launches on July 5, 2026.

ACCESS represents a meaningful step forward for Medicare, introducing outcome-aligned payment and patient choice into chronic care at national scale. Withings commends the CMS Innovation Center for creating a framework that rewards innovation, quality, and transparency, and is proud to participate from day one.

Withings will join ACCESS as both a participant and a device partner to other participants.

## **A New Standard for the Patient Experience in Medicare**

For the first time, Medicare beneficiaries can choose their own program to manage their chronic conditions. That changes the equation: delivering a premium care experience becomes central to earning and retaining patient participation.

*"Withings has been building for this moment for over a decade with over 15 million users, more than 1 million patients actively monitored, and 28 CES Innovation Awards. We bring the combination that ACCESS demands: devices patients want to use every day, a physician-supervised clinical program, and EHR integrations that keep patients connected to the care team they know and trust."* said Patrick Sheehan, Vice President of Value-Based Care, Withings.

## **A Commitment to Affordable, High-Quality Care**

Withings is dedicated to helping build a high-quality, affordable healthcare system. Every Medicare beneficiary deserves a premium care experience regardless of their ability to pay. Withings will waive all beneficiary cost-sharing under the ACCESS Model, ensuring patients can

participate at no out-of-pocket cost, without changing their care team, and without disrupting their existing Medicare coverage.

### **An Integrated Care Experience for Patients and Their Care Teams**

Withings will offer an integrated program that strengthens the relationship between the patient and their care team. For health systems and ACOs, this means their patients get access to continuous care between visits and their clinicians get a trusted partner in managing their patients' chronic conditions.

### **A Connected Device Partner for Other ACCESS Participants**

Withings will also make its connected device ecosystem available through the ACCESS Tools Directory, enabling other ACCESS participants to leverage the same FDA-cleared, cellular-enabled devices in their own programs. This includes BPM Pro 2, a cellular blood pressure monitor engineered for value-based care, combining the capture of both clinical measurements and patient-reported outcomes at the point of reading.

### **Looking Ahead**

Withings is actively developing partnerships with health systems, ACOs, and other ACCESS participants, and will share further announcements in the coming weeks.

Health system and ACO leaders interested in learning more are encouraged to contact [whs-marketing@withings.com](mailto:whs-marketing@withings.com).
